

## Vermont Electric Cooperative Invitation to Participate in New Electric Water Heater Program

Vermont Electric Cooperative (VEC) is inviting VEC members to help test a cutting-edge energy management technology designed to make the electric grid cleaner, cheaper, and easier to run.

Would you be interested in participating in this innovative pilot project? If you're eligible, you can get a total of \$50 in electric bill credits and be entered into two raffles for a \$500 cash prize!

Here's how it would work: a technician would install a device (pictured here) developed by Burlington startup Packetized Energy on your electric water heater, enabling it to heat water when electricity is plentiful and to avoid times when it's scarce.

There'd be no change to the supply or availability of hot water to your household, and it wouldn't alter the amount you pay for electricity. You'll be able to override the device at any time through a digital app, your individual electricity use data will be protected, and you can leave the program at any time.

Find out if you are eligible by filling out a short enrollment form at <http://bit.ly/2Fipdn0> . You can also call 802-635-2331, email [support@vermontelectric.coop](mailto:support@vermontelectric.coop), or visit [www.vermontelectric.coop](http://www.vermontelectric.coop) to learn more.

Our electricity system is undergoing an exciting transformation. This project is another way that VEC members like you can be a part of the future - and save money in the process!
